Twelve Important Reasons Why You Should Use AMLO In Your Plane

AMLO stands for Perfect Aero-Motor-Lubricating Oils.

AMLO oils have:

Uniform physical and chemical tests, the lowest cold test and solidification point, stable viscosity at working temperatures, smooth and ample fluidity, free flow at all temperatures, minimum carbon deposit, uniform lubricating faculty.

AMLO oils will give you:

Easy cold priming, lighter load at the start, immediate oil pressure, stable lubrication under all load and flying conditions, ease of mind and relief from lubricating troubles from the take-off until you land, maximum power of your engine at all times, less ignition trouble through thinning of oil or fouled spark plugs than any other oil, more and safer flying hours than any other oil. 100% lubrication and less overhaul expense.

AMLO oils are the only lubricating oils on the market especially developed and refined for Aero-Motor lubrication. They are not automobile or motor oils, renamed or shifted for use in airplane engines.

AMLO oils represent the result of years research and development by highly-trained chemists and engineers in well equipped chemical and testing laboratories.

AMLO oils are now manufactured on a commercial scale in one of the newest and most modern refineries, specializing in the production of the highest type lubricating oils. Equipment, machinery and methods used in this refinery at Fort Worth, Texas, are recognized to represent many new features and outstanding progress in the art of refining.

AMLO oils are refined from the same 100% paraffine-base RANGER crude from our own wells, pumped through our own pipe line, unmixed and uncontaminated by other crude, and are therefore always strictly uniform and meet all specifications for aircraft-engine-lubricating oils.

AMLO oils, however, do more than just meet such physical and chemical tests. They stand up better in performance tests, on the testblock at ordinary temperatures or in the refrigerated testroom at low temperatures, and in actual flight-tests, than any other lubricating oil so far produced.

AMLO oils have better fluidity at temperatures below zero than any other oil used for airplane engine lubrication.

AMLO oils eliminate changing the grade of oil during winter or cold weather; they perform and lubricate equally well during summer and winter, when warming up your plane or when flying at high altitude.

AMLO oils are straight-run, unblended and undoped paraffine-base lubricating oils, with the same viscosity, all year round, needed for your type of motor, your own safety and maintenance and long life of your engine and plane. Using AMLO oils, you do not have to sacrifice viscosity in order to get lubrication and fluidity at low temperatures.

AMLO oils have zero cold-test, stable viscosity, smooth fluidity and free flow at all temperatures. They make cold priming easy and prevent strain on your motor.
